Facebook Profile | LinkedIn Profile | Portfolio | Github Profile

I'm a self-motivated, fun and hard working person. I'm passionate about programming, learning and exploring old & new technologies. I consider myself a good team worker, always looking for new and challenging projects.

Education

Master's Degree - Economic Informatics, *Bucharest University of Economic Studies* — 2025 – Present, Bucharest, Romania

Bachelor's Degree - Economic Informatics, *Bucharest University of Economic Studies* — 07/2022 – 2025, Bucharest, Romania

Mathematics-Informatics Profile, *"Gheorge Șincai" National College* — 09/2019 – 07/2022, Bucharest, Romania

"Fundamentals of C++ Programming" Course, *InfoAcademy* — 05/2019 – 07/2019, Bucharest, Romania

Mathematics-Informatics Profile, *"George Călinescu" Theoretical High School* — 09/2018 – 07/2019, Bucharest, Romania

Professional Experience

Front-end Developer, *Postis* — 03/2024 – Present, Bucharest, Romania

- Developed and maintained two large-scale web applications from scratch, currently in production and used by tens of thousands of users monthly.
- Tech stack: React.js, TypeScript, Chakra UI, Redux Toolkit, AG Grid, React Simple Maps (interactive geoJSON-based maps with country/county drill-down and filtering), React Mapbox, Google Analytics, Figma.
- Implemented reusable components, optimized performance, and ensured responsive, accessible UI/UX.
- Delivered pixel-perfect implementations of Figma designs and collaborated closely with designers to ensure UI/UX consistency.
- Collaborated with backend team to integrate REST APIs and optimized data flow through Redux.

Full-Stack JavaScript Engineer (Contractor), *Virto Solar* — 10/2024 – 01/2025

- Worked in an Agile/Scrum environment, participating in sprint planning, daily stand-ups, and retrospective meetings.
- Developed and maintained features across the stack using React.js, TypeScript, SCSS, Node.js, Express.
- Collaborated with cross-functional teams to resolve tickets, meet sprint goals, and ensure timely delivery.

Back-end Developer, *Outpush* 06/2023 – 02/2024

I've worked with the following tech stack: Node.js & Express, Typescript, MongoDB, AWS. My main responsibilities consisted in implementing new features, investigating and solving clients' issues, refactoring and optimizing components of the code bases (Front-end with React, Typescript, React-Admin and Back-end with the technologies already mentioned).

Full Stack Web Developer, *Innovation Staffing Services SRL* 10/2022 – 02/2023

- Front-end
  - Built UI components with React.js and Redux-toolkit by following a layout design
  - Integrated UI / UX frameworks and libraries, such as: Material UI, Chakra UI, React Bootstrap
  - Managing the global state with Redux-toolkit
- Back-end
  - Used Node.js & Express.js to structure endpoints and RESTful APIs
  - Connected Web Servers made with Node.js and Express.js to NoSQL (MongoDB) and SQL (PostgreSQL) databases
  - Implemented 3rd party APIs (Stripe) for managing SaaS operations

Back-end Developer, *BeezApp* 2022 – 01/2023

- Used Node.js and Express.js to structure the server and the RESTful API
- Used PostgreSQL to store and maintain data
- Extracted the models of the database and API according to the functionalities of the MVP

Back-end Developer, *Superdev* 2020 – 2021

- Worked on a VPS with CentOS8 to structure internal files and directories, to create virtual servers with Nginx and host the APIs (made with Node.js and Express.js) and SPAs (made with Vue.js / React.js)
- Created endpoints, controllers and service logic with Node.js and Express.js
- Documented the endpoints with Swagger
- Used CouchDB to store and maintain data

Skills

Node.js
Developed back-end services using Node.js with frameworks such as Express.js and Hapi.js, building servers that integrate with databases and front-end interfaces.

Javascript / Typescript
Full-stack development using JavaScript and TypeScript across both front-end and back-end.

React.js
Built front-end applications with React.js, leveraging libraries and frameworks such as Material UI, Chakra UI, Bootstrap, AG Grid, and React Simple Maps, Mapbox.

Web Scraping
Applied ethical web scraping techniques in personal projects to collect and process useful data, using libraries such as Cheerio.js and JSDOM.

PostgreSQL
Used PostgreSQL as the primary database for storing and managing diverse datasets, designing systems around a relational structure.

Linux
Configured and maintained a CentOS-based VPS to host multiple applications, including Single Page Applications (SPAs) and WordPress sites.

MongoDB
Used MongoDB as a NoSQL database for applications requiring flexible, non-relational data structures.

Hosting platforms (Heroku, Netlify/Vercel)
Deployed and managed back-end applications on Heroku and front-end applications on platforms like Netlify and Vercel.

Organizations

SiSC, *Back-end Developer* 11/2022 – 2025

Hronica, *Editor-in-Chief* 09/2020 – 07/2021

Certificates

Certificate of Professional Competence @Ministry of Education
Managing websites and computer operating systems &
Providing data processing facilities, including support services

Database Design And Programming With SQL @Oracle Academy
